GENERAL INFORMATION:

APPLICANT MARC J. RUBENITIED C ALD AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TILE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TILE REPERBRICE: 107196.136

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 32657

LENGTH: 597

                                                                   This is the amino acid sequence of a 22 kDa coat protein that is encoded by open reading frame ORF6 (see AAV08875) of grapevine leafforl vitus type 2 (GLSAV-2) RNA (See AAV08875) of grapevine coat proteins 4 (See AAV08864-72) for a genome includes 9 open reading frames (see AAV08864-72) for a polyprotein, an RNA-dependent RNA polymerase, heat shock proteins, coat proteins of unknown function (see AAW7746-84). These can be used to produce antibodies useful for detecting GLRAV in samples e.g. by ELISA (claimed). The nucleic acid molecules can be used to produce probes and primers for such molecules can be used to produce probes and primers for such cuties, agrobacterium tumefaciens, grape, citrus, beet or tobacco citris, agrobacterium tumefaciens, grape, citrus, beet or tobacco citrian and produce transgenic plants (claimed). Hey can be used to impart GLRAV-2 resistance to vitis scion or roctstock cultivars or tristeza vitus resistance to citrus scion cultivar/rootstock cultivars (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
encoding DNA, useful e.g. to impart grapevine leafroll resistance grape and tobacco plants and detect grapevine leafroll virus
                                                                                                                                                                                                                                                                                                                                                                                                                        .

The protein has mol. wt. 22.2 kD. The corresponding gene was obtained from reverse transcribed RNA isolated from purified SBYV. The fragment is useful for the production of virus resistant transgeric plants by genetic engineering methods. ("Jpdaced on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                     preparing a medicament for treating, preventing and/or alleviating diseases associated with yeast or fungi or proliferative disorders, such as cancer, or for preventing apoptosis in certain diseases. The compounds or polypeptides, or the genetically modified organism are useful for preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease.

                                                                                                                                                              This invention describes a novel nucleic acid representing a synthetic Bax gene. The Bax gene of the invention is useful for identifying Bax-resistant yeast or fungl, identifying, or obtaining and identifying Candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death. The products of the invention have cytostatic, fungicide; immunosuppressive, virucide and vasotropic activity and can be used in vaccines or for gene therapy. The isolated nucleic acids, polypeptides, pharmaceutical compositions, antisense molecules and antibodies are useful as medicaments or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 LMSDSNLSNLVITDASS-LNGVDKKLLSA-EVEKMLVQKGAPNEGIEVVFSLLLYALAAR 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ischaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polypeptide associated with the Bax gene described in the disclosure of the invention.
                         New isolated nucleic acid representing a synthetic Bax gene, useful as medicament for treating, preventing and/or alleviating yeast or fungal infections or proliferative disorders, or for preventing apoptosis in certain diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 ITSPKVQRADSDVIFSNSFGERNVVV---TEGDLKKV---LDGCAPLIRFINKLRTFGRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        233 AKHPKIEK----VAFTGSTATGKIIMKLAAESNLKKVTLELGGKSPNIVFND--ADLDKT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TEAYVOFCIAYKHKLPQLNAAAELGIPAEDSYLAADFLGTCPKLSELQQSRKMFASMYAL 175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             215 LEHHNKDSVLYNEKLOKLILPQIEASLPG-SKFLYADVYN--PMMEMIQNPSK----YGF 266
                                                                                                                                                                                                                                                                                                                                                                   The invention relates to identifying target proteins (ABS90797-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      promoter;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein identification, signal transduction pathway, metabolic pathway, hybridisation assay, genetic mapping, gene expression control, promoter

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to identifying target proteins (ABB94316) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences having an using suitable search parameters, where plant sequences having an E-value sequences are selected of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              252 KDSVLYNEKLQNLLPQIEASIPG-SKFLYADVYN--PMMEMIONPSK-----YGFKETKR

The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilitic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 1.0 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB899132-AAB999143,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -----VVTEGDLKKVidgcapltrftn-Kirtfgrtft 116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AbiE (AAW17788) is a phage abortive infection protein that increases resistance to phage. It is the expression product of an open reading frame found in the 4.5 % EcoRI fragment (AAT68648) of Lactococcus lactis (L.L.) subsp. lactis WI plasmid pSRC860. AbiE acts at, or before, phage replication and has no homology with known Abi proteins. It protects against phages of 936 and P335 types, also against c2 when present on a high copy number plasmid. AbiE can be used to impart phage resistance to bacteria, esp. L.I. that no not have natural resistance. The recombinant bacteria can be used in the produ. of fermented dairy products.
                                                                                                                                                                                                                                                                                                                                                                                                              Isolated DNA encoding the AbiE protein of Lactococcus - for protecting strains used in production of fermented dairy products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8.6%; Score 85; DB 18; Length 599;

This sequence represents a grapevine leafroll virus (GLRaV-5) protein sequence of the invention. The DNA sequence can be used in an expression construct. The construct is useful for providing resistance to GLRaV infection in a recombinant plant cell by transforming the plant cell with it, where transcription of the polynucleotide sequence interferes with a normal viral function such as movement, encapsidation or replication of viral RNA. The polynucleotide sequence is expressed as an antisense viral RNA. The polynucleotide sequence is expressed as an antisense cat encodes a GLRaV coat protein, preferably a defective GLRaV coat protein or a GLRaV HSP70 homologue protein. The GLRaV-5 DNA is useful for the synthesis of GLRaV, as diagnostics and probes, for viral seme mapping and for induced plant disease resistance. It Is also useful to detect and quantitate expression of GLRaV in plant tissue prior to use in vegetative propagation, by detecting the presence of GLRaV RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 TISPKVQRADSDVIFSNSFGERNVVVTEGDLKKVLDGCAPLIRFINKLRTFGRTFTEAYV 120

This sequence represents a 46.5 kD immunogenic fragment of the protective polypeptide antigen (PPA) of the bacterium Erysipelothrix thusiopathiae. This bacterium infects livestock, particularly pigs (swine erysipelas), and is also able to cause disease in humans. The recombinantly produced PPA fragment may be used as a subunit vaccine for shimulating an immune response in animals against Brysipelothrix rhusiopathiae. As the vaccine can be produced recombinantly, it can be produced on a large scale. The vaccine is suitable for transmucous
                                                                                                                                                                                                                                Novel recombinant protective polypeptide antigen useful as a vaccine for protecting livestock against Erysipelothrix rhusiopathiae infection

/note="The polyprotein encompasses domains for papain-like leader proteinase, putative methyltrensferse, RNA helicase and RNA-dependent RNA polymerase (RARp); ORFla/b; papain-like leader proteinase is capable of autoproteolytic release from the rest of the polyprotein, and is a replicational enhancer. RRRp is presumably expressed via a + 1 ribosomal frameshift"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /protein_id="AAF14300.1"
